Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

upon close review of the claims, the prior art, and applicant's remarks it appears that the allowance of claims 1-10 are appropriate.

The prior art of U.S. Pat. No. 7,069,054 by Doi, provides a technique for optimizing the weighting in an adaptive antenna device with a predetermined transmission power of a terminal station. The transmission power of the terminal station and the weighting of the adaptive antenna device are determined separately from each other (col. 13, lines 10-64; col. 14, line 56 – col. 16, line 16; Figs 1, 4, 5, 7, 10). However, Doi does not disclose estimating an interference wave power given by the transmission signal from each of the plurality of radio base stations and determining a weight vector in the adaptive antenna of each radio base station to minimize a sum of square errors between reception signals and desired signals for all the radio base stations which simultaneously use the same communication channel, as claimed in claims 1-5 and simultaneously determining a weight vector in the adaptive antenna of each radio base station and a transmission power of each terminal station to minimize a sum of square errors between reception signals and desired signals for all the terminal stations which simultaneously use the same communication channel by minimizing the sum of the interference wave power obtained, as claimed in claims 6-10. Therefore, Doi does not meet the requirements of the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
